DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I in the reply filed on 9/4/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102/103

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Gao et al (U.S. Pre-Grant Publication No. 2004/0002005). The reference is directed to a battery comprising an anode comprising lithium metal (26) and an intercalation material (24), and a nonaqueous electrolyte. In [0013] it is disclosed that “[t]he introduction of an electrolyte into the battery promotes a reaction between the electrolyte and lithium metal in the anode, forming a solid electrolyte interface (SEI) at the anode.” Thus, the battery electrolyte comprises a precipitate, as recited in claim 1. Although the reference does not teach the claimed process limitations, the patentability of a product does not depend on its method of production. If the product in a product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). Furthermore, once the examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. *In re Marosi*, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983). See also MPEP §2113. In this case, the composition of the precipitate is not specified in the claims, and even though the claims define an aromatic compound, it is not clear if this material is present in the post-precipitation electrolytic solution. Further, the claimed “metal sheet” is contained in the process recitation and is not considered to be part of the electrolyte, although Gao et al. disclose a copper foil anode

current collector (22) in Fig. 1. Accordingly, the instant claims are not considered to be distinguished over Gao et al.
